CAREER OBJECTIVE

Software engineer with 7+ years of experience building scalable ERP, document-automation, and SaaS products across the .NET and TypeScript/Node ecosystems on AWS. At KAZ Software I design and deliver cloud-native business solutions with serverless EDI pipelines, LLM-based extraction, to multi-tenant compliance and regulatory-AI platforms. I care about clean architecture, developer experience, and shipping reliable software, and I actively build and publish open-source tooling.

PROFESSIONAL EXPERIENCE

KAZ Software *Jul 2020 – Present*

Senior Software Engineer (promoted July 2024, previously Software Engineer & Associate Software Engineer)

- **Supply-chain management platform:** multi-tenant B2B platform that runs core operations for clients, automating order processing, supplier and purchase-order management, shipment tracking and EDI for supplier documents, with in-app chat, a file manager and a managed email/notification system (C#, .NET, Node, Electron, React, AWS).
- **Document processing system:** ingests supplier documents and uses OCR plus LLM extraction to classify files, pull out structured line-item and field data, and validate it against business rules, removing manual data entry (AWS Lambda, Step Functions, Python, EasyOCR, LayoutLMv3).
- **Multi-tenant e-invoicing compliance SaaS:** helps businesses validate invoice data against the UAE national e-invoicing (PINT-AE) standard before going live, through CSV upload, field mapping, rule-based validation, exception investigation and audit-ready evidence packs (React, Node/Express, PostgreSQL, Azure).
- **Regulatory intelligence platform:** collects and monitors global news and regulatory sources, extracts and classifies content with OCR and LLMs, and delivers AI summaries and risk insights in real time via a multi-agent pipeline with RAG (Python, FastAPI, Celery, LangChain/LangGraph, Pinecone).
- **Regulatory document intelligence:** automatically tags tax and regulatory articles by risk category using a transformer model, so analysts can triage and review them faster (ModernBERT, FastAPI, Docker).
- **Desktop and integration tooling:** puts platform actions on the user desktop via an Electron widget and syncs with clients platforms (AWS SAM Lambdas).

Alphasoft Technology Limited *May 2019 – Feb 2020*

Software Developer

- **Hospital Management System:** manages patient care end to end, from assessment and billing to a live dashboard and real-time doctor-receptionist alerts (SignalR).
- **Dynamic Website generator:** lets non-technical staff create a full website from a submitted form, without hand-coding each one.
- **Payroll system:** computes salaries from job cards and runs an approval workflow with attendance-based reporting (C# / ASP.NET Core / SQL Server).

TECHNICAL SKILLS

- **Languages:** C#, TypeScript, JavaScript, Python, Node.js
- **Frontend:** React, Next.js (App Router), Vite, Tailwind CSS, shadcn-ui, Redux/Zustand/TanStack Query, Electron, Expo / React Native
- **Backend:** .NET Core / .NET 10, ASP.NET MVC & Razor, Node/Express, FastAPI, REST APIs, JWT (RS256)
- **Cloud & Infra:** AWS Lambda, Step Functions, S3, Secrets Manager, EventBridge; Docker; pnpm/turbo monorepos; CI/CD
- **AI / ML:** LLM document extraction, LayoutLMv3 OCR, ModernBERT classification, Hugging Face, Web Speech API
- **Data:** PostgreSQL, MongoDB, MSSQL Server; Prisma, Entity Framework (ORM)

- **Practices:** Git, multi-tenant & RBAC architecture, design patterns, clean/hexagonal architecture

OPEN SOURCE & PERSONAL PROJECTS

- **Ecommerce Platform:** Online store and admin console: shoppers browse and buy products, while staff manage catalog, orders and stock. Built as a full-stack app (Next.js 15 + .NET 10 + MongoDB, AWS Lambda).
- **Tender Operations Platform:** Operations hub for a small contracting and tender business: tracks project finances, working capital, assets, staff and deadline reminders so the owner sees profit/loss and dues in one place (React + Vite + Express + Prisma, AWS SAM).
- **Vocaly:** Voice typing for any website: a Chrome extension that turns speech into text in any input field, in English and Bengali, so users can write without typing (Manifest V3, Web Speech + Google Cloud).
- **RX PDF Viewer:** Embeddable PDF viewer for React apps, with selectable text, so developers can show documents without a heavy dependency (pdfjs-dist, npm).
- **Colorful Copy Manager:** Clipboard history manager: a Chrome extension that remembers recently copied text locally so users can re-copy it later, storing nothing externally (TypeScript).
- **EdTech Platform:** Course-selling site: creators publish video courses with secure streaming, subscriptions and certificates, and learners track progress (Next.js + Express + Prisma).
- **Bebodh Crawler:** Distributed web crawler: collects and scrapes web content at scale using worker queues and multiple datastores (.NET, Python/Django, Next.js, Postgres/Mongo/Redis, Celery).
- **UpAlert:** Job-alert app: lets job hunters save search filters and get matched openings in one mobile feed, with application tracking (Expo/React Native).

EDUCATION

Daffodil International University 2019
BSc in Computer Science and Engineering (GPA 3.1 / 4.0)

Narail Govt Victoria College 2013
Higher Secondary School Certificate (GPA 4.80)

Narail Govt High School 2011
Secondary School Certificate (GPA 4.75)
